

FEATURES AND BENEFITS OF FORESITE SECURITY SERVICES

Why partner with Foresite?

- Increase each deal size and create more opportunities for recurring revenue streams.
- Become even more relevant to your customers and in the market by solving real problems and selling solutions instead of simply selling reliable products.
- Become feared by and irreplaceable with your competition.

What is the value to your clients?

- High profile and extremely expensive cyber-crime and cyber-attacks are now a common occurrence.
- Companies lack internal resources and expertise to address security and compliance requirements.
- All businesses share a need for log management and correlation as part of their Information Security Strategy. In many cases, this is mandated by regulatory requirements such as PCI, HIPAA, etc.
- Companies are looking to reduce capital expenditures, we have a flexible OPEX price model.

WHAT IS SO FAB ABOUT FORESITE?

Features

- 24/7/365 fully managed security event monitoring and analysis service backed up with stringent SLAs.
- Provides actionable intelligence and business related decision making around information contained within those log files, thus increasing your operational security, efficiency and avoidance of any potential downtime.
- Detection of anomalies within log files, creating alerts automatically through business rules, and further verified for action by means of human analysis by our SoC Engineers.
- Provides identification, escalation and remediation against possible security compromises.
- Protects business critical applications and servers from compromise you would not have previously seen or known about.
- Utilizes a team of expert analysts to review your millions of log file alerts in real-time, providing a consistent approach, and freeing up operational manpower.

BENEFITS

- Reduces operational costs and increase operational effectiveness by means of the handing off of configuration and continual monitoring functions that would normally require large amounts of manual intervention.
- Go further than just meeting a variety of compliance objectives, and use your compliance controls to provide actionable business intelligence, shaping your company's future path.
- Understand and make use of the log information that is flowing out of your applications in the form of business intelligence.
- Affords peace of mind through the continuous monitoring, alerting, and management of infrastructure by highly skilled experts.
